

The Lima In MyCity

By (R)Evolution Let's Change Now · Taken at Matrusri Engineering College

Lima In MyCity, A COP in MyCity Simulation Conference was conducted at Matrusri Engineering College, Saidabad as a part of getting the Conference of Parties (COPs) closer to the youth so as to build a community of young Climate Leaders who would lead several initiatives. 70 Students took part in the simulation which lasted for 3 hours wherein they learnt the basics of climate change and how negotiations take place in the real time world.

The entire model was simulated by using C-ROADS by Climate Interactive developed by the premier Massachusetts Institute of Technology. It was a successful simulation with the negotiations reaching the goal of 2 degree centigrade. Every student had to deal with the real time use of technology as an important parameter of climate change mitigation and how best can they learn to work towards a sustainable future. Through the COP in MyCity Project, We wish to bring a positive change in the thinking of an individual such that he influences the process of change.
