

Virtual Labs

**Making Engineering & Science education
engaging, effective, immersive and online**

January 2017

Virtual Labs

1. Reaches out to Students and Teachers in Engineering and Science Colleges with Virtual experiments
2. Accessible anywhere, anytime, and is free
3. Effective reference material and 'Self Learning Tool'
4. Enhances students performance in exams
5. Improves competency and confidence

Experiments done in Physical Labs are available in Virtual Form.
They are Available Accessible Asynchronous Anywhere Anytime (A⁵)

Global Trends

1. Educational budgets in developing and under-developed countries continue to shrink [2]
2. e-learning and open-learning programs are gaining popularity [2]
3. e-learning through lectures alone have proved to be insufficient
4. Practical skills imparted through experiments enhance overall competence
5. Virtual Labs simulates practical experience with related theories and testing.
6. Online statistics indicates that virtual lab users have been increasing in India suggests increasing usage trends in times to come [3]

“Virtual and open learning initiatives are poised to bring a dramatic change in science education but cannot completely substitute existing educational institutes or hands-on practical laboratory courses” [2]

Importance of a Lab

A lab is a critical component of engineering education. Science and engineering is a study of natural phenomena. This requires students to work in a laboratory to promote discovery and creativity.

About Virtual Labs

Virtual Labs project is an initiative of MHRD, GoI, under the National Mission on Education through ICT (NMEICT).

Virtual Labs aims to benefit:

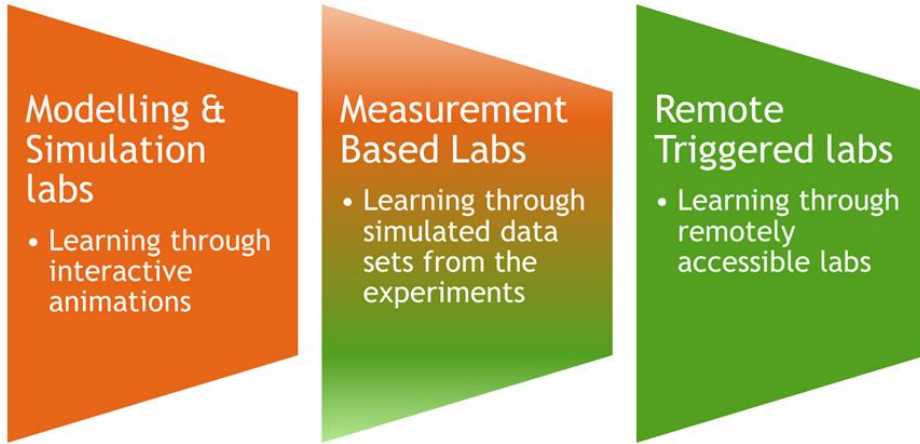

- ❑ All students and faculty of Science and Engineering Colleges - who may not have access to good laboratory infrastructure
- ❑ High-school students - to motivate them to take up higher studies and research
- ❑ Researchers across institutions - to collaborate and share equipment as well as resources
- ❑ Engineering colleges - who can use the rich content and teaching resources

All Experiments are accessible from this site- <http://www.vlabs.ac.in> with 185 Active Labs and 31 upcoming.

The screenshot shows the homepage of the Virtual Labs website. At the top, there is a navigation menu with links for ABOUT, ALL LABS, PARTNERS, CONTACT, and VLABS DEV. Below the menu is a banner with the text "Online labs and experiments from top technology institutes. Take them for free!" and statistics: Labs 205+, Experiments 1515+, Visits 58,15,322+, and Usage 1,588,137+. The main content area is titled "Featured Labs" and lists five categories: Problem Solving, Bio-Medical Signal and Image Processing Lab, Data Structures, Chemical Engineering, and FAB laboratory. Each category has a brief description and icons for LAB and LECTURE. At the bottom, there is a section for "Disciplines and Domains".

About Virtual Labs

3 types of Labs

Virtual Labs is a Joint Effort of 12 Partner Institutes

Spread of Labs- 10 Domains & over 185 Labs

These labs are on Open edX platform.
An integrated set of experiments that form a “Learning Management System” (LMS)

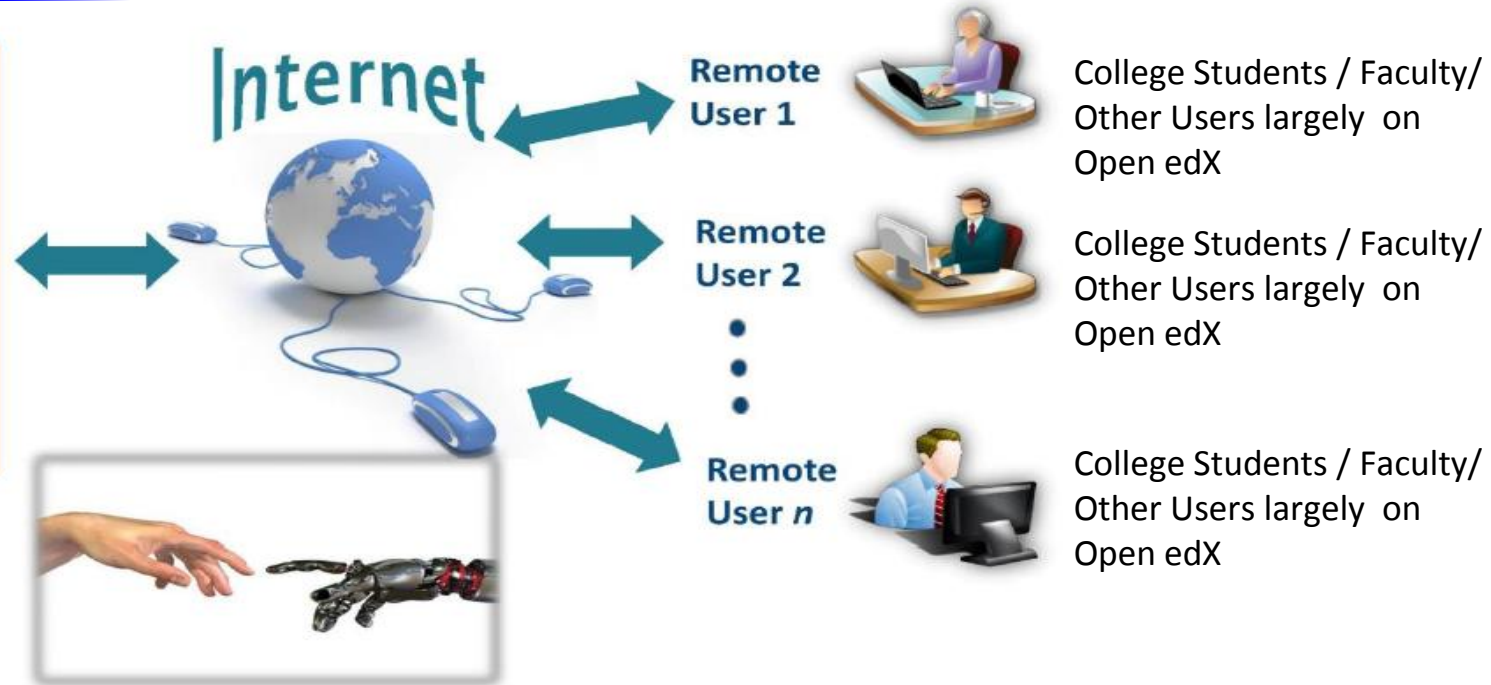

Virtual Labs - Usage Architecture

185 Labs, 1500+ Experiments
from 12 Institutes

15,88,000 Usages, 77100
Students, 325 Nodal Centers

Institute Developed
Experiments / Labs on
Cloud (AWS)

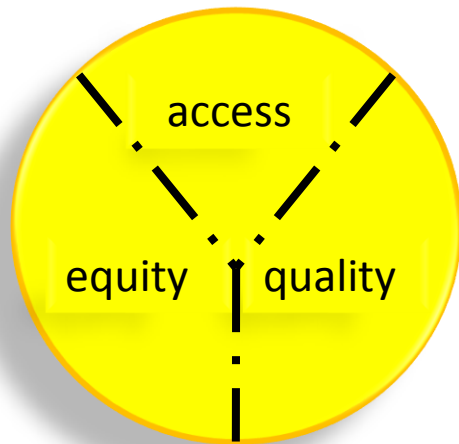

Virtual Labs is a Project under the NMEICT of the Ministry of MHRD covered under Section 3.14 of the Mission document –“Development and Realization of Virtual Laboratories and supporting facilities for e-learning” [1]

Indian Government Policy on Engineering Education

1. It seeks to bridge the digital divide, the gap in the skills to use computing devices for the purpose of teaching and learning among urban and rural teachers/learners in Higher Education domain
2. Aims to empower those, who have hitherto remained untouched by the digital revolution and have not been able to join the mainstream of the knowledge economy.

Focus of e Learning

1. appropriate pedagogy for e-learning
2. **facility of performing experiments through virtual laboratories**
3. on-line testing and certification
4. on-line availability of teachers to guide and mentor learners
5. utilization of available Education Satellite (EduSAT) and Direct to Home platforms
6. training and empowerment of teachers to effectively use the new method of teaching learning etc.

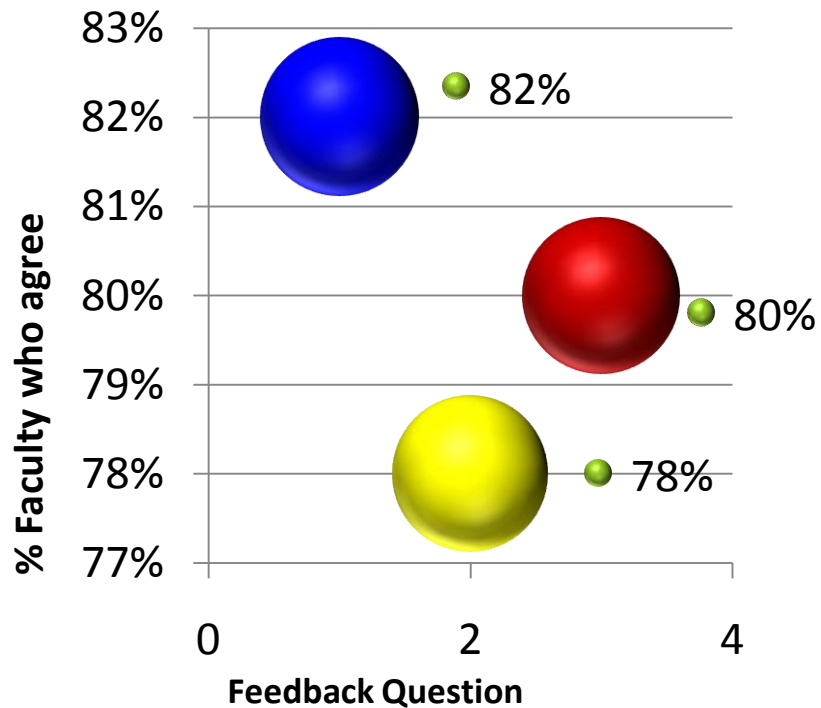

Connectivity, Low cost devices, E- content

Technology Enabled Learning

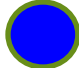

1. “National Mission on Education through Information and Communication Technology- Mission Statement “ Section 3.14. http://www.aicte-india.org/downloads/Mission_Document.pdf

Virtual Labs - Impact

Faculty Perception of Virtual Lab Usefulness

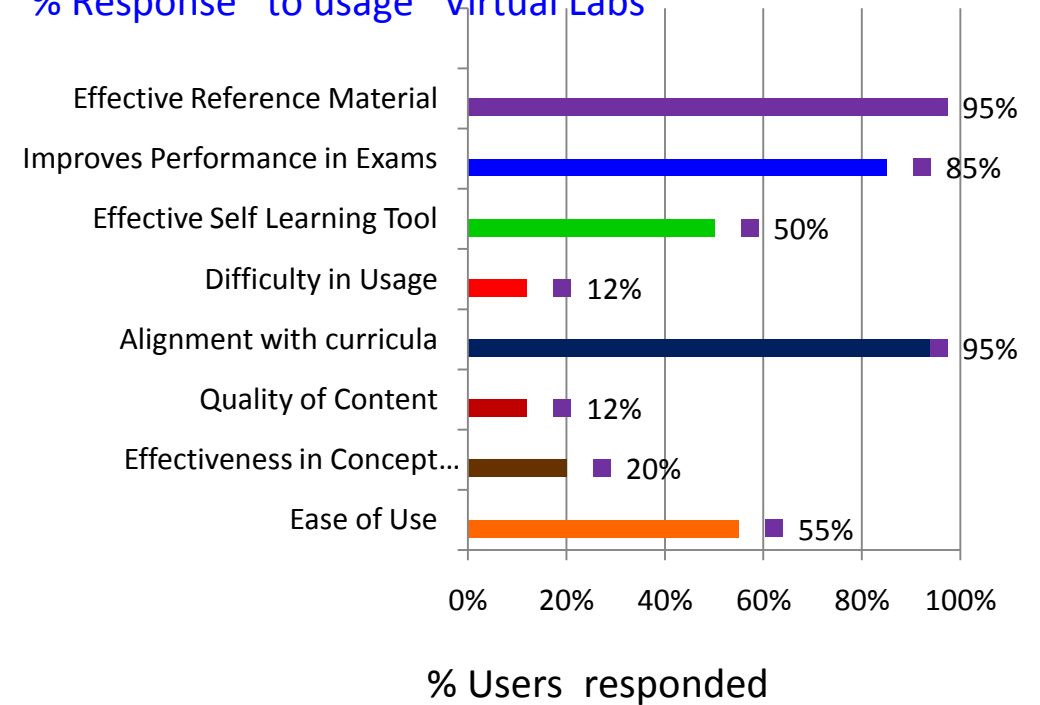

Feedback Questions

-  1. Virtual Labs can be a supplementary tool and reduce Teacher Effort
-  2. Effective in Overcrowded class rooms due to easy access
-  3. Interest in using Virtual Labs for continuous evaluation and final exams

Student Perception of Virtual Lab Usefulness

% Response to usage Virtual Labs

Virtual Labs - Impact

Feedback from Students

0% 50% 100%

% of Students

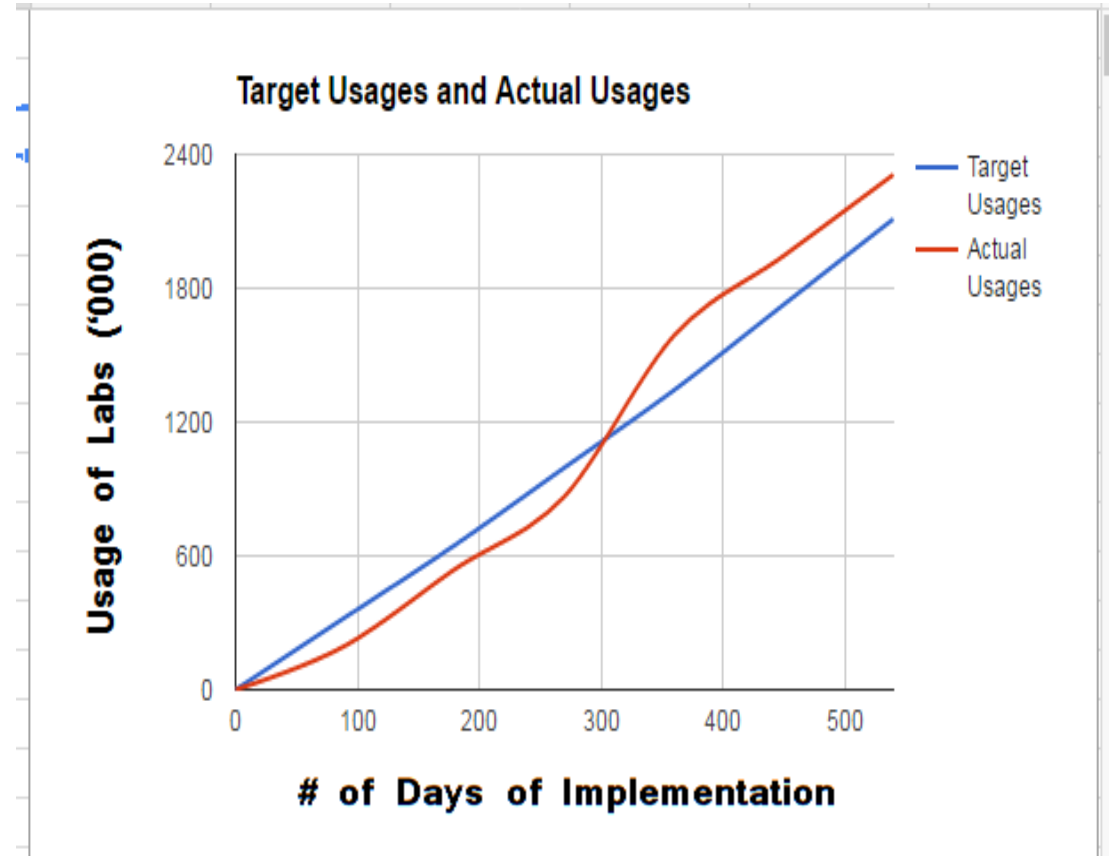

Typical Reuse Preferences of Students

Impact - Outreach

Outreach done through Nodal Agencies through Workshops in colleges across the Country:

- 15.88 Lakh Usages from 77114 students, 327 Nodal Centers, 727 Workshops.
- Labs completely linked to NPTEL
- Recorded in the National Digital Library for posterity
- Labs and Outreach being prepared for rapid growth - spread over colleges, Usages and alignment of experiments to the needs of colleges
- Labs are accessible on Mobile Platform , On Open edX and with Single Sign on

Data from Virtual lab Outreach Logs as on December 2016 [4]

Impact – Outreach Network

Virtual Labs uses the Outreach Model to Evangelize and enthuse students

Engage private agencies (Nodal Centers) for outreach of Virtual Labs and enthuse students:

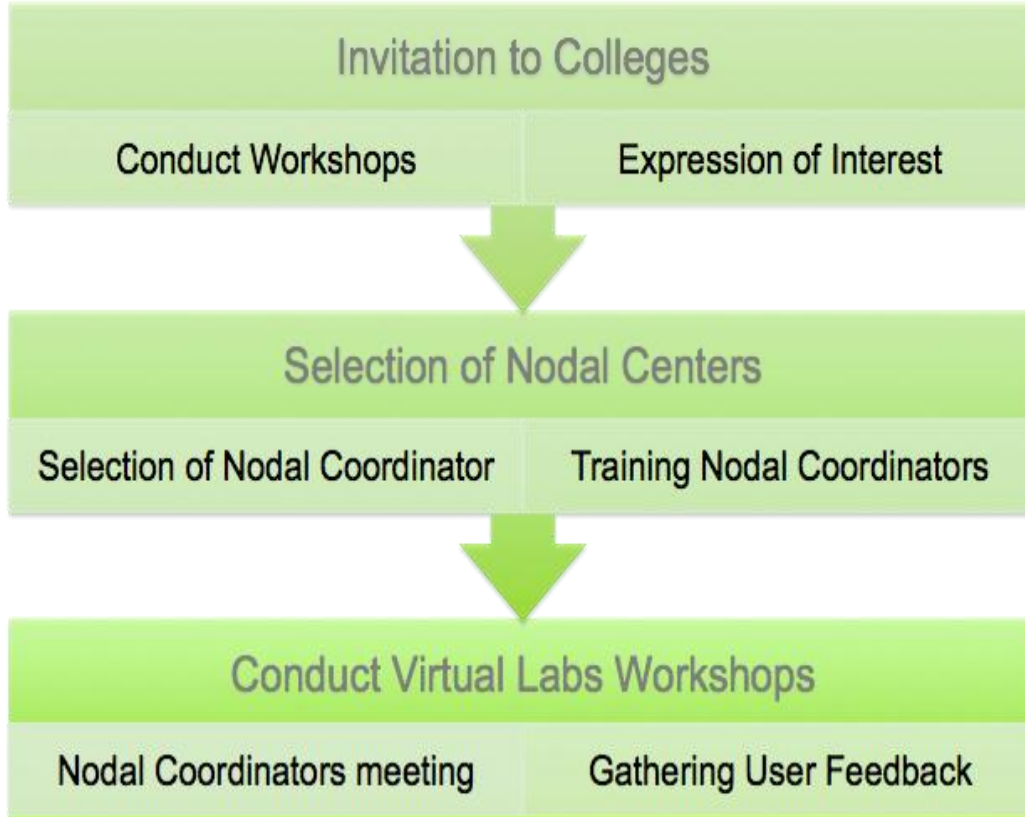

1. **Build awareness** about labs and usage
2. Provide a **minimum level training to the local faculty members/research scholars** in the colleges, through on-site **workshops**
3. College faculty engage their students in using the virtual labs.
4. identify the gaps in syllabi of universities & existing labs
5. Facilitate additional labs/experiments to fill these gaps.

Faculty and Institutes are facilitated to develop labs
College Clouds to overcome Internet Availability issues – Under development

Outreach - Partners with Virtual Labs

Become a Nodal Center

Benefits of a Nodal Center

1. College will be on the National Map of MHRD's ICT Projects
2. Technical & financial support for training students, conducting workshops & developing own customized experiments
3. Students can undertake development projects as their academic project.
4. As a Nodal centre, the college will be helping other colleges & schools nearby to spread the knowledge through ICT.
